SUMMARY

AI/ML enthusiast and Electronics & Communication Engineering undergraduate with hands-on experience building machine learning and deep learning solutions, including NLP-driven chatbots and computer-vision-based diagnostic systems. Skilled in Python, applied ML, and full-stack integration, with a strong track record across hackathons and competitive problem solving.

EDUCATION

Vellore Institute of Technology

Bachelor of Technology in Electronics and Communication Engineering; CGPA: 8.48

2023 – 2027

Bhopal, India

SKILL SET

Languages: Java, Python, C, C++, SQL, HTML/CSS, JavaScript

AI/ML: Machine Learning, Deep Learning, NLP, Computer Vision, Scikit-learn, TensorFlow, Pandas, NumPy

Developer Tools: Git/GitHub, VS Code, Django, React Native, MERN Stack

Databases: MySQL, MongoDB

INTERNSHIP

MPOnline (Government of MP) | AI/ML & Advanced Software Engineering Internship

May 2026 – Jul 2026

-Built **ML models** (regression, classification, decision trees, random forest, SVM, clustering, PCA) using **Python, NumPy, Pandas**, and **Scikit-learn**, and developed neural networks with **TensorFlow/PyTorch** for computer vision and NLP.

-Practiced full-stack **SDLC: DBMS, SQL, OOP, Git/GitHub**, and **CRUD** app development, followed by requirement analysis, system design, backend development, testing, and cloud deployment for a capstone project.

PROJECTS

Vital Vision | NLP, MERN Stack, Python

[GitHub](#)

-Developed an AI-powered medical chatbot that analyzes user-reported symptoms and prioritizes triage responses to help patients access appropriate care faster.

-Built using **NLP** for symptom analysis, the **MERN Stack** for the web application, and a **Python** backend integrated with a **Geolocation API** for real-time appointment booking.

-Researched intent-classification and symptom-severity triage techniques to improve the accuracy and reliability of chatbot recommendations.

OralCancer MedTech | Deep Learning, Django, React Native

[GitHub](#)

-Built a mobile-based screening tool for early-stage oral cancer detection to improve accessibility to preliminary diagnosis.

-Built using a **CNN-based Deep Learning** model, **React Native** for the cross-platform mobile app, and a **Django** REST API backend.

-Researched CNN architectures and data augmentation strategies to achieve **97.8% detection accuracy**.

Smart Surveillance for Public Transport | Computer Vision, AI

-Built a real-time monitoring system for public transport to detect anomalies and enhance passenger safety.

-Built using **OpenCV** and **YOLO** for real-time object detection and video analysis.

-Researched anomaly-detection models and optimized **YOLO** inference for real-time performance on live video feeds.

CERTIFICATIONS

Intro to Machine Learning – Kaggle

[\[Link\]](#)

Applied Machine Learning in Python – Coursera (University of Michigan)

[\[Link\]](#)

Agentblazer Champion 2026 – ServiceNow

[\[Link\]](#)

Health Hackathon 2026 – Johns Hopkins University Collaboration – Participation & Project Showcase

[\[Link\]](#)

Health Hackathon 2025 – Johns Hopkins University Collaboration – Participation & Project Showcase

[\[Link\]](#)

EXTRACURRICULAR

Competitive Programming: Solved **250+ problems** on LeetCode; maintaining consistent coding streaks.

[\[Link\]](#)

Open Source: Active contributor to GitHub projects focusing on AI/ML tools and web accessibility.

Languages: Proficient in English, Hindi; learning **Japanese** and **German** (250+ day Duolingo streak).

[\[Link\]](#)

Leadership: Student Partner at **IEEE** and **VITronix Club**, organizing technical workshops for 1000+ students.
